

NAM TRUNG TRAN - NATHAN TRAN

0410 387 975 | trung.tn05@gmail.com | [linkedin.com/in/nathan-tran](https://www.linkedin.com/in/nathan-tran) | [My Website](#)

EDUCATION

Adelaide University, Australia (Global Citizens Scholarship)

2023 - 2026

Bachelor of Computer Science, Major in Artificial Intelligence

GPA: 6.7/7.00

EXPERIENCE

AI Engineer Intern

Dec 2025 - Feb 2026

Viettel Solutions Corporation

Hanoi, Vietnam

- Fine-tuned and benchmarked natural language processing models, measuring performance across multiple task types to compare candidate approaches
- Designed and ran testing and evaluation procedures for an AI product line, verifying output reliability and accuracy before release
- Worked with senior engineers to analyse results and translate findings into recommendations for scalable AI deployment

Summer Research Assistant

Dec 2024 - Feb 2025

SET Faculty, University of Adelaide

Adelaide, SA, Australia

- Collaborated with Professor Hung Nguyen on automating MITRE ATT&CK flow graph generation from Cyber Threat Intelligence reports, leveraging Large Language Models to improve efficiency and accuracy
- Validated research reliability by rerunning 20+ experimental outputs, ensuring reproducibility of findings and conducted comparative evaluation of Gemini 1.5 Pro and Gemini 1.5 Flash models

Datathon – 1st place

April 2025

SQUAD x insightfactory.ai/18-hour competition

Adelaide, SA, Australia

- Collaborated in a 3-person team to tackle an anonymized dataset with 19 features and an unlabelled target variable, conducting exploratory data analysis, feature engineering and visualization to uncover insights and patterns
- Developed and evaluated machine learning models under time constraints, applying data cleaning, preprocessing and validation techniques to deliver top-performing solution

PROJECTS

NBA Fair-Value Model | [live demo](#) | *Python, scikit-learn, Streamlit, pytest*

July 2026

- Built a gradient-boosted model predicting an NBA player's fair salary from on-court performance alone, trained on six seasons and roughly 2,100 player-seasons scraped from Basketball-Reference and ESPN
- Achieved R^2 of 0.73 under leave-one-season-out cross-validation, holding between 0.62 and 0.78 across every held-out season
- Removed target leakage in the original model, adding a regression test that blocks any salary-derived column from re-entering the feature matrix; shipped an interactive Streamlit explorer with player lookup and leaderboards

Auto-Updating VISA Intelligence System | [live demo](#) | *Python, ChromaDB, Llama 3.3*

Apr. 2026 – Present

- Built a production RAG pipeline over live Australian immigration content: chunked JS-rendered pages into 768-dim ChromaDB embeddings, answered with Llama 3.3 70B constrained to retrieved sources
- Lifted top-1 retrieval accuracy from 50% to 80% (top-3: 70% to 100%) by diagnosing a vocabulary mismatch between applicant and government wording, then adding LLM query expansion with reciprocal rank fusion
- Hardened the daily ingestion job to 26 consecutive successful runs across all 4 sources, and expanded the test suite from 100 to 213 tests

PriceCheck AU | *TypeScript, Next.js, tRPC, Prisma, PostgreSQL*

July 2026 – Present

- Built a live grocery price-comparison platform tracking 63,662 products and prices across Coles, Woolworths and Aldi, unified behind one data-source interface
- Raised the trusted-match confidence threshold from 0.80 to 0.92 after finding 37% of high-confidence matches compared mismatched pack sizes, cutting falsely-trusted matches
- Automated the weekly data-quality gate (dynamic row floor, staples basket, per-aisle regression checks) so a clean crawl merges itself while a degraded one stays queued for review

SKILLS

Languages: Python, C/C++, SQL, JavaScript/TypeScript, HTML/CSS, R, MATLAB

Machine Learning: scikit-learn, pandas, NumPy, PyTorch, LangChain, ChromaDB, RAG

Web & Databases: Node.js, Express, Vue.js, Next.js, tRPC, Prisma, Tailwind CSS, REST APIs, PostgreSQL, MySQL, SQLite

Tools: Git, GitHub Actions, pytest, Streamlit, Docker, Jupyter
